

## Polished Grocery Store

## Polished Grocery Store

Structure Type: Retail Floor

Project Type: Commercial

Location: Aurora, CO

Products: UltraFiber 500

DAY1 Finishing Aid

**Overview:** Grocery stores and supermarkets demand a lot of flooring. This makes polished concrete a natural choice for these applications.

Because the floor is uncovered, plastic stage shrinkage cracking and other surface defects are more visible. Microfibers are used to resist and limit shrinkage cracking. When synthetic fibers are used, however, they remain visible in the concrete. Synthetic fibers can also cause scarring on the surface during the polishing process.

UltraFiber 500 is invisible in concrete, while retaining equal or better performance in all aspects. UltraFiber 500 sheers cleanly during grinding, leaving no scars or marks after polishing.
