

Skagit Riverwalk Park

Skagit Riverwalk Park

Structure Type: Masonry Wall/
Pavement

Project Type: Public

Location: Mt. Vernon, WA

Products: ColorFlo Liquid Color
Antique Release
X Series Mortar Color

Overview: This public space serves a dual purpose as park and flood wall. It provides recreation space around a masonry wall designed to protect downtown from periodic flooding of the river.

The paved and cast concrete segments of this project utilized Solomon Colors ColorFlo 920 Slate and 920 Smoke for permanent, environment and wear resistant color. Textured portions used Brickform Antique Release in Charcoal to enhance the appearance.

The brick masonry walls used Solomon Colors Mortar Color in 44X. By coloring the mortar, the brick walls were given a more subdued appearance that closely tied in with the integrally colored concrete. The X Series Mortar Color creates permanent color that lasts the life of the mortar.
