Project Profile

Project: Restaurant

Profile: Lythic Polished Concrete Products

Materials: Lythic Densifier
Lythic XL Densifier
Lythic SPD Protector
Lythic Cleaner

Location: Belgium

Overview: The restaurant overlooks a golf course which hosts corporate events and weddings. The contemporary space has to withstand food and drink stains for several hours before cleaning is possible.

The floor was densified three times during the grinding and polishing stages to reduce the capillary size and harden the surface as much as possible. Lythic SPD Protector was then applied and high speed burnished.
